 - My project on the "Training and assessment of psychomotor skills using computer-assisted orthopaedic surgery system (CAOSS)" involves using a CAOSS system to be used as a training system.
 - The system has a role in training the orthopaedic trainee in trajectory planning and implementation which forms a substantial part of current and future orthopaedic practice. The concept is based on the basic orthopedic principle where the placement of a surgical tool at a specific site within a region via a trajectory that is planned from X-ray-based 2D images and is governed by 3D anatomical constraints.
